Simple Main Menu System Documentation

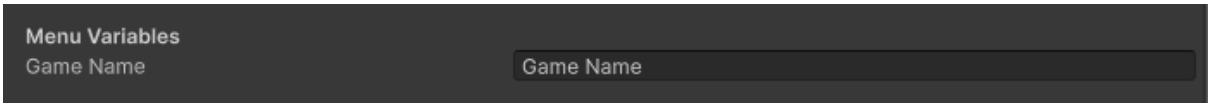

Made by @theeagledev

WARNING! This asset requires TextMeshPro to work, please install that before importing the asset.

First off, drag the “Menu Canvas” prefab found in the imported folder into your scene, or use the provided demo scene in ../Demo/Main Menu Demo.

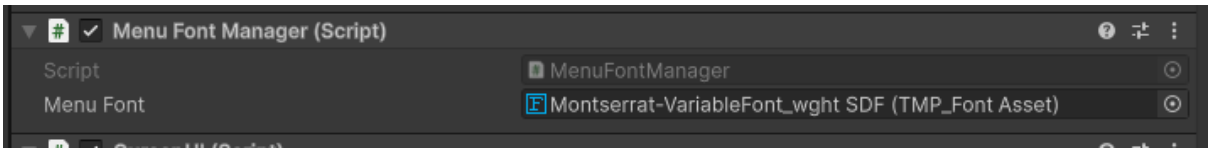

How to change the name of the game in the menu?

Click on the Menu Canvas and then change the Game Name variable under Menu Manager to whatever you want! It should update the text for you.

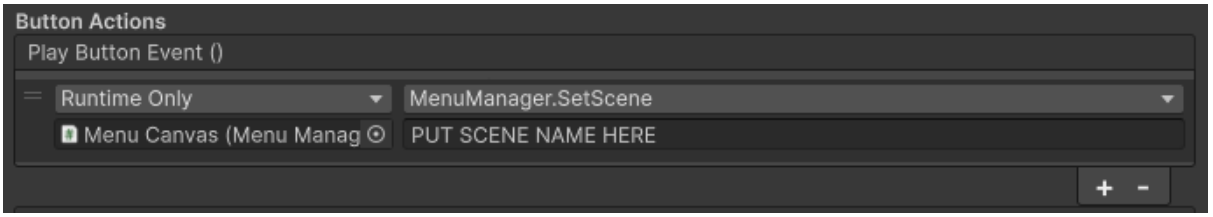

How to change the font?

Click on the Menu Canvas and then change the Menu Font asset underneath the Menu Font Manager script. If you want to set the font individually then disable / remove this script!

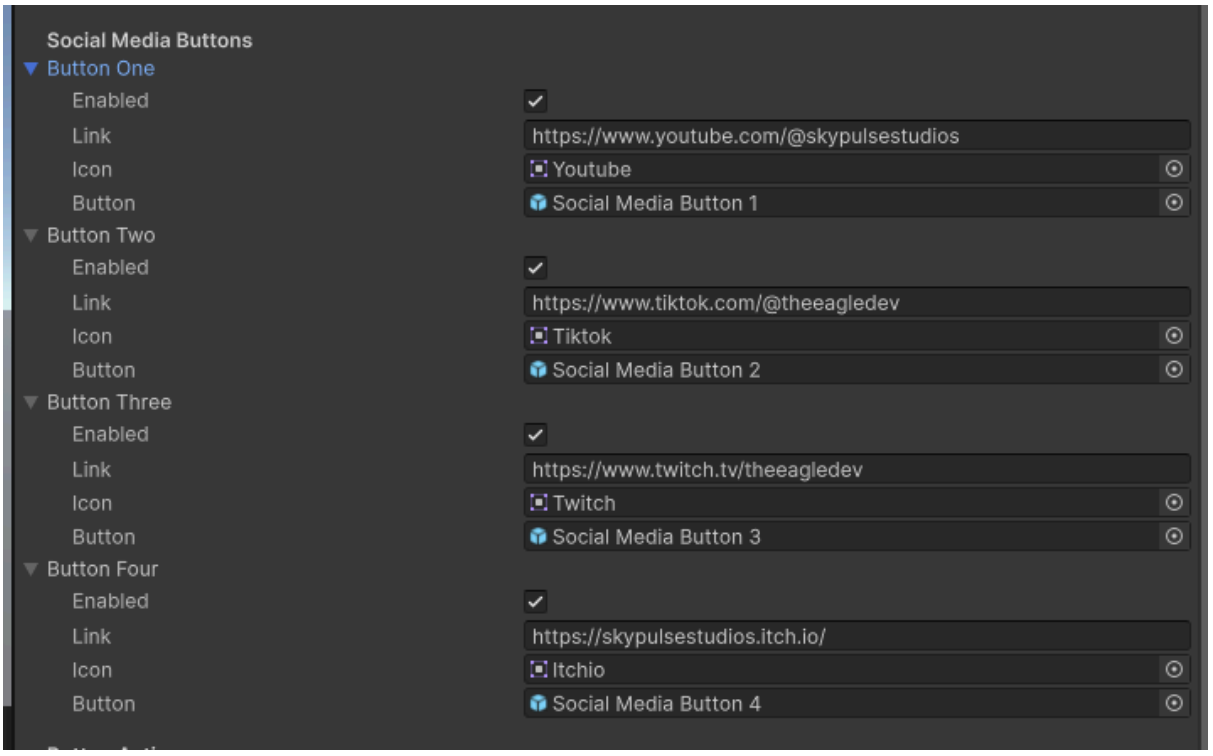

How to change the scene that the play button goes to

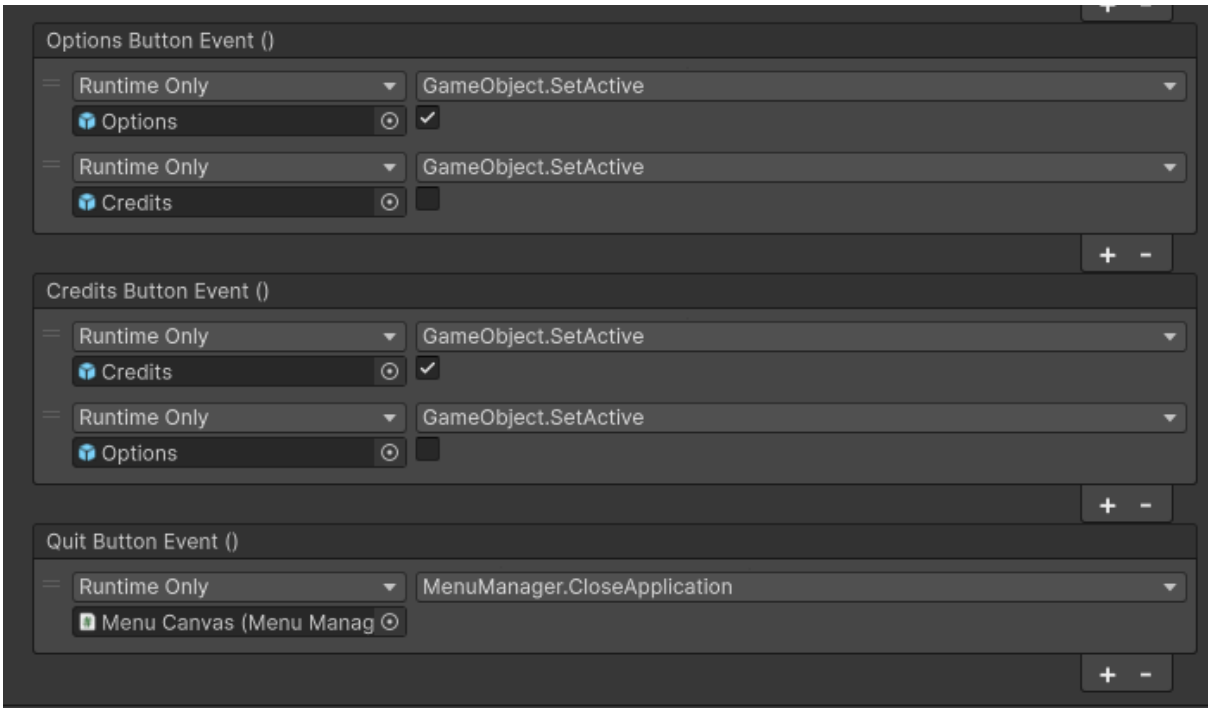

Under the Play Button event in the Menu Manager script (after clicking on Menu Canvas) then change the pre-defined “PUT SCENE NAME HERE” variable to whatever scene name you like!

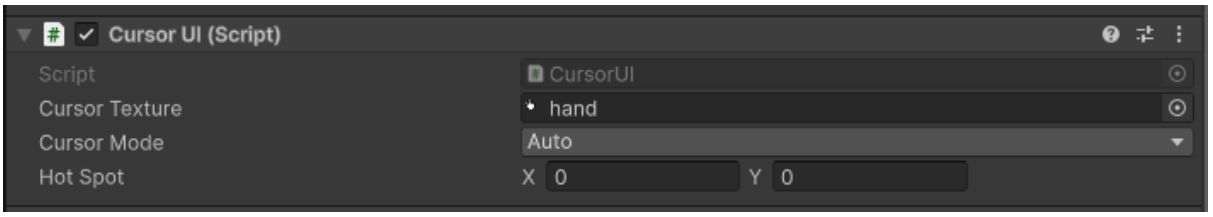

To change the social media buttons, edit the variables here found under the Menu Management script.

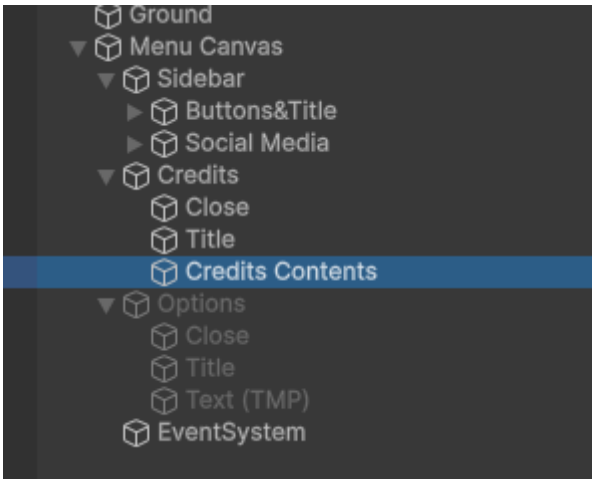

To change what the other title screen buttons do, change these events.

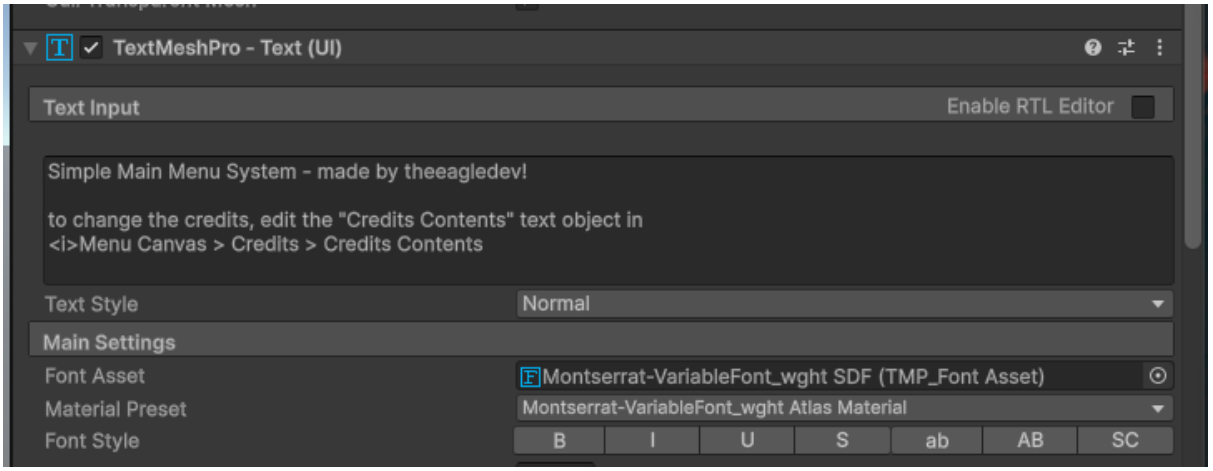

To change the button hover cursor, change the Cursor Texture variable of this script in Menu Canvas

To change the contents of the credits screen, edit the following text box.

Thank you for supporting a small developer! :D If there is anything I missed out in this document, please email me at eagle@skypulse.dev and I will update it.
